For: FOLDING GROOMING TABLE STEP SYSTEM

ABSTRACT OF THE DISCLOSURE

5

A folding grooming table step system including a frame with a U-shaped angled forward member forming two spaced legs and a connecting base member, a U-shaped vertically disposed rearward member hinged to the forward member and including two spaced legs connected by a base member, and a connecting rod spanning the two spaced
10 legs of the rearward member. A plurality of wide, deeply offset steps with a low rise are each hingedly connected to the angled forward member. A pair of bracket members are each hingedly connected to the steps and each include an elongated guide channel through which the connecting rod extends to allow the steps and the rearward frame member to fold proximate the forward frame member.
